

robop what...?

Robop is a creative and sustainable product that works to rid your property of pest birds. It does this without harming the birds, assaulting them with loud bangs or turning your building into a fortress covered in nets and spikes.

Since 2001 Robop has gone from a Scottish inventor's spark of genius to a robust British made product installed in 15 countries. As a company we are passionate about what we do, proud of what we've achieved, and are dedicated to solving your bird control problems.

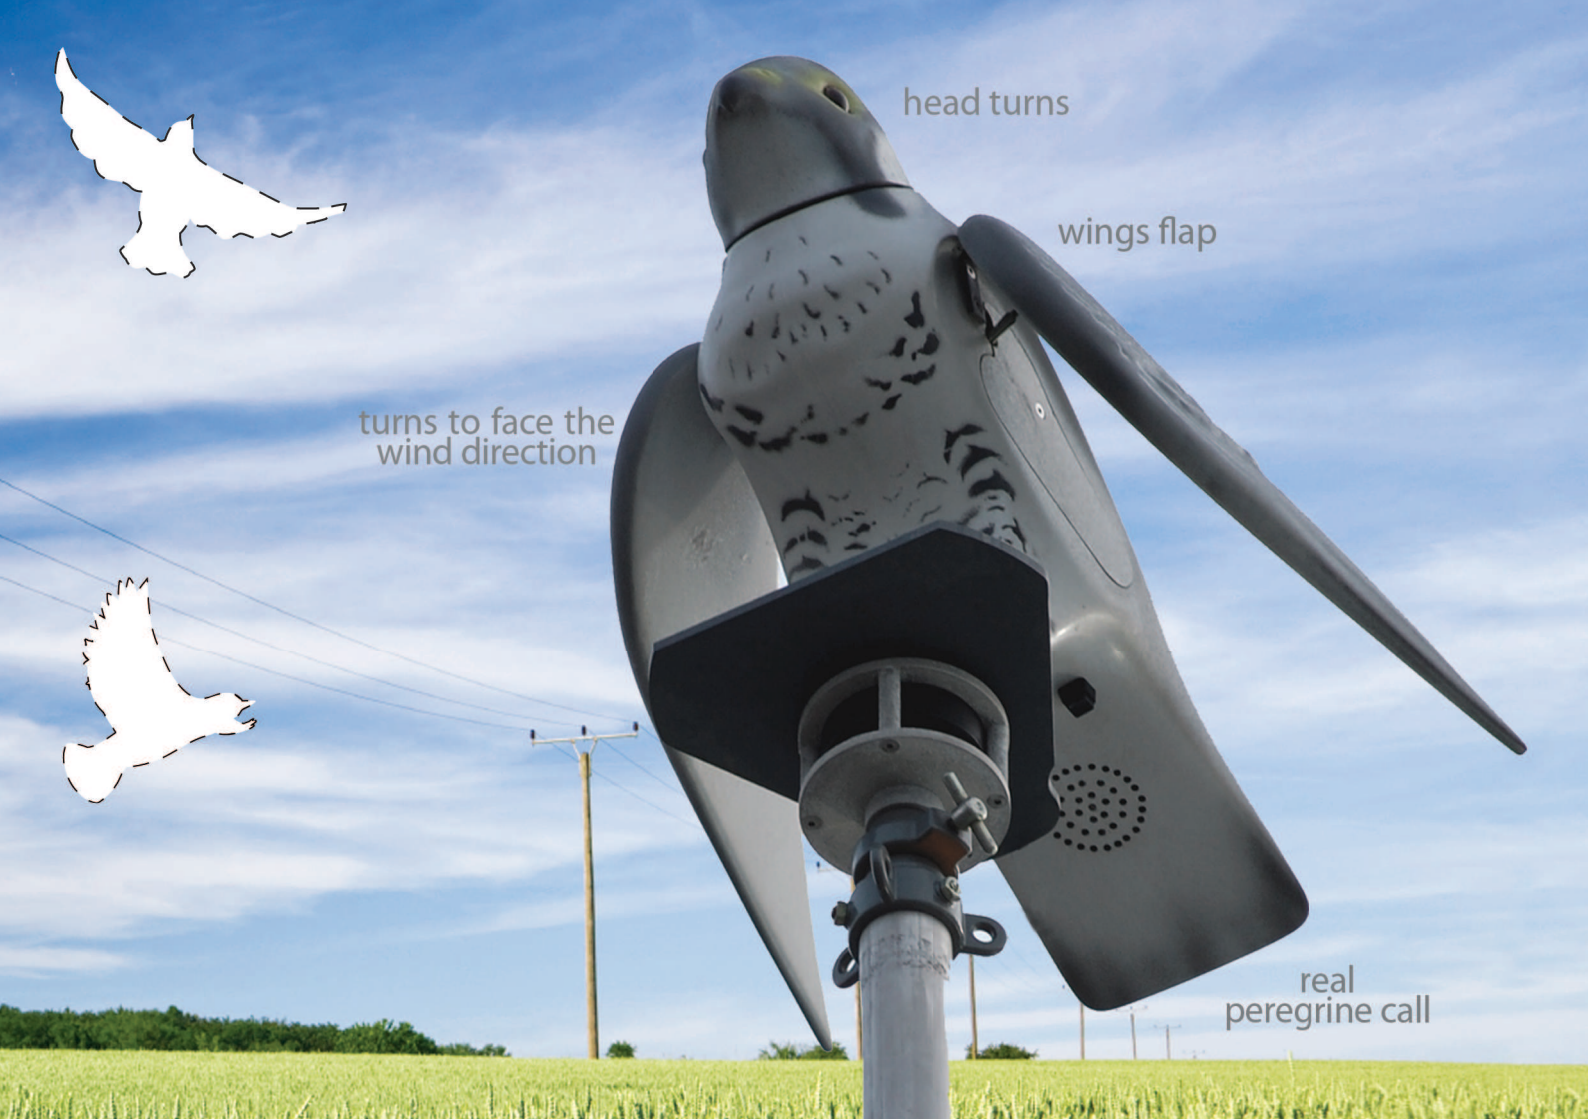

Robop Installation at Exchange Place, Edinburgh.

where have all the birds gone?

The majority of all pest birds are terrified of peregrine falcons. We make a robot that looks, moves and sounds like a real peregrine. Robop's deterrent effect can be maintained for a staggering length of time, way beyond many other products, 7 years and counting for one customer. This makes Robop both environmentally friendly and extremely cost effective. We tailor-make Robop solutions to tackle your bird problem because we understand every site with a bird problem is different.

head turns

wings flap

turns to face the
wind direction

peregrine call

the early bird
catches the
worm.

Robop has supplied almost as many industry sectors as we have customers, from shopping centres to salt mines and everything in between. Today we supply mainstream customers who simply want a proven, reliable product that makes economic sense.

something to crow about

“It’s like having a force field over the garage” **BMW dealer**

“Looks fantastic on our new building and came in well under our budget” **Cre8 Architects**

“After Robop was installed we went to clean the roof and didn’t find a single feather”
Thales Optronics

“It’s still keeping the birds away after nearly 7 years” **Johnson & Johnson**

“We were quoted £150,000 for netting yet Robop cost less than a tenth of this and it works”
B&Q
